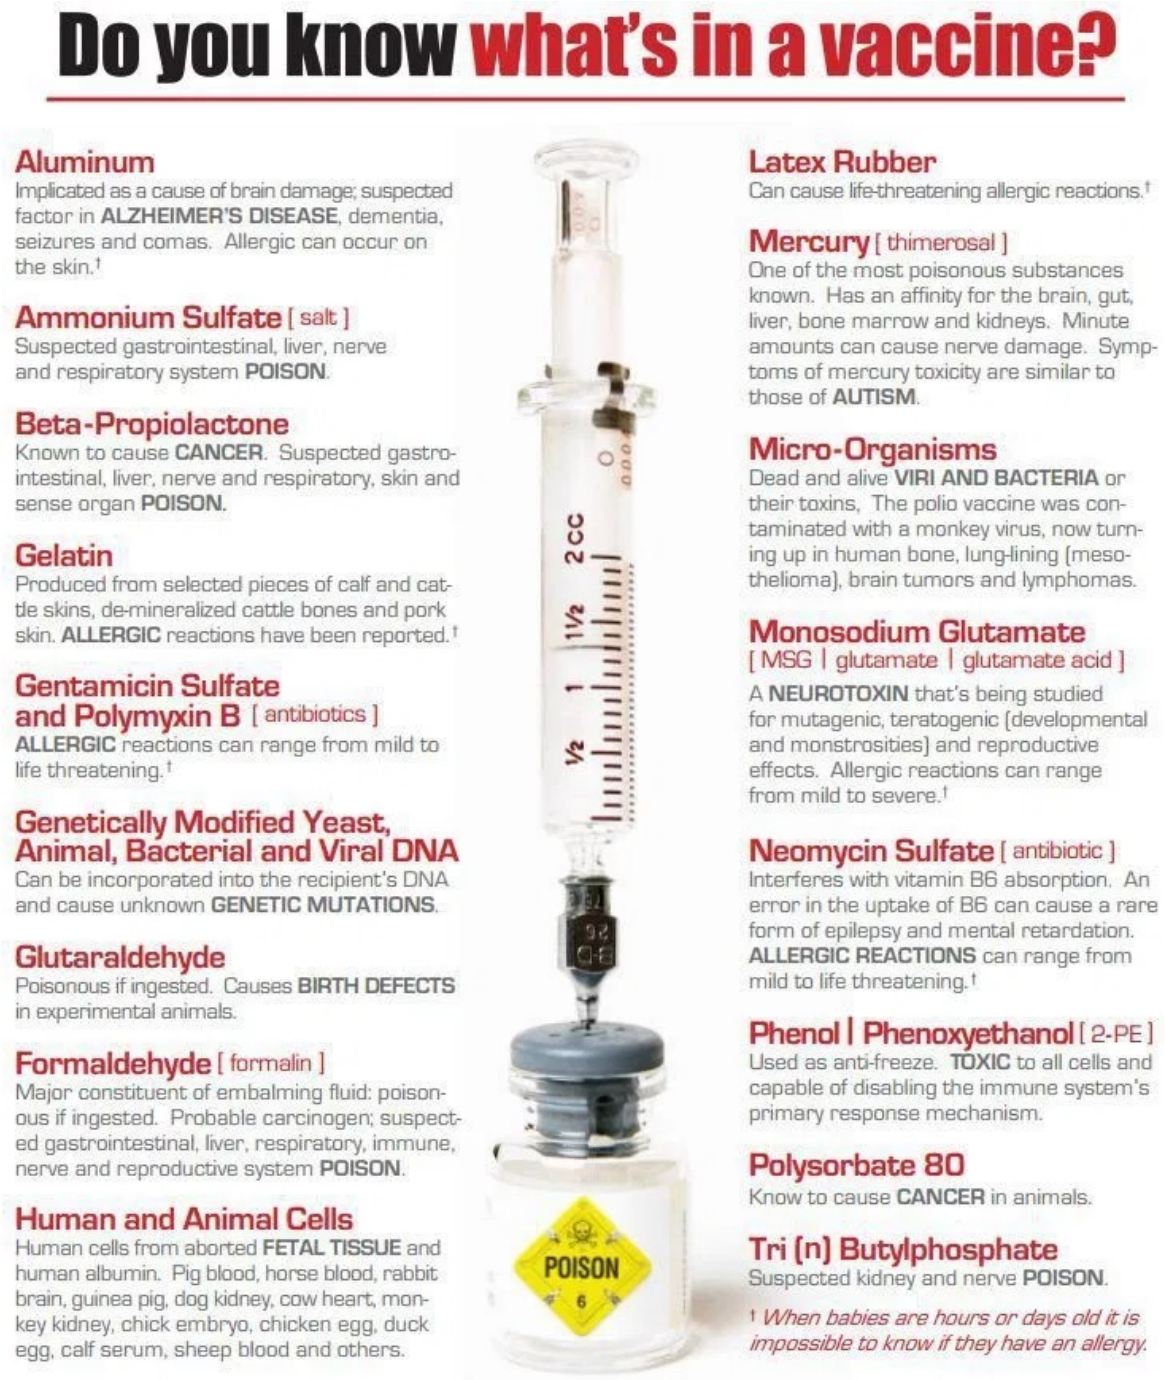
Vaccines: Did They Really Save Us From Dis-ease?

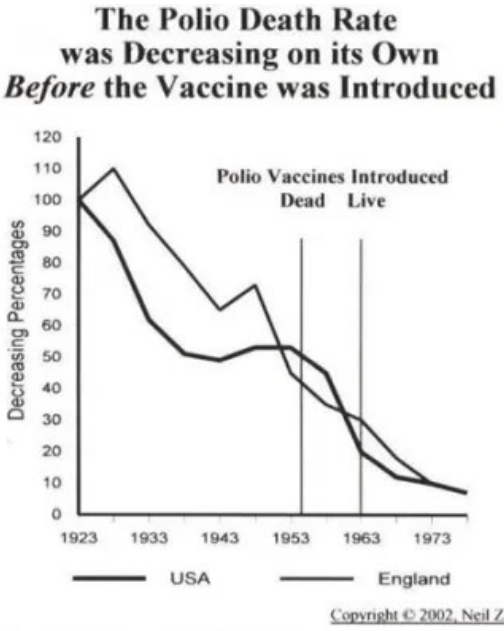
View all posts by →

Most people believe that vaccines saved us from deadly diseases. We actually don't have any scientific evidence to prove this, but nevertheless we still believe this is the case. It would be unethical to conduct a double-blind, placebo controlled study to prove the efficacy of vaccines since we already ostensibly know they work and wouldn't want to put innocent children (the control group) at risk of disease.

Jump right to the evidence



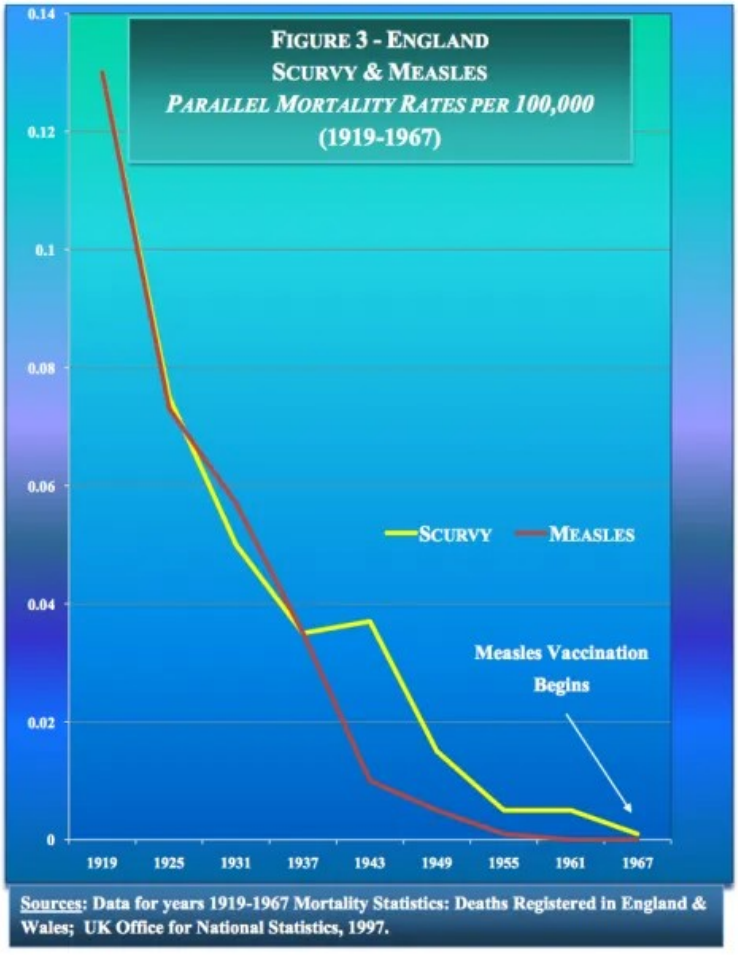
Do you know what's in a vaccine?
Aluminum
Implicated as a cause of brain damage; suspected factor in ALZHEIMER'S DISEASE, dementia, seizures and comas. Allergic can occur on the skin.†
Ammonium Sulfate [salt]
Suspected gastrointestinal, liver, nerve and respiratory system POISON.
Beta-Propiolactone
Known to cause CANCER. Suspected gastrointestinal, liver, nerve and respiratory, skin and sense organ POISON.
Gelatin
Produced from selected pieces of calf and cattle skins, de-mineralized cattle bones and pork skin. ALLERGIC reactions have been reported.†
Gentamicin Sulfate and Polymyxin B [antibiotics]
ALLERGIC reactions can range from mild to life threatening.†
Genetically Modified Yeast, Animal, Bacterial and Viral DNA
Can be incorporated into the recipient's DNA and cause unknown GENETIC MUTATIONS.
Glutaraldehyde
Poisonous if ingested. Causes BIRTH DEFECTS in experimental animals.
Formaldehyde [formalin]
Major constituent of embalming fluid: poisonous if ingested. Probable carcinogen; suspected gastrointestinal, liver, respiratory, immune, nerve and reproductive system POISON.
Human and Animal Cells
Human cells from aborted FETAL TISSUE and human albumin. Pig blood, horse blood, rabbit brain, guinea pig, dog kidney, cow heart, monkey kidney, chick embryo, chicken egg, duck egg, calf serum, sheep blood and others.
2 CC
POISON
6
Latex Rubber
Can cause life-threatening allergic reactions.†
Mercury [thimerosal]
One of the most poisonous substances known. Has an affinity for the brain, gut, liver, bone marrow and kidneys. Minute amounts can cause nerve damage. Symptoms of mercury toxicity are similar to those of AUTISM.
Micro-Organisms
Dead and alive VIRI AND BACTERIA or their toxins, The polio vaccine was contaminated with a monkey virus, now turning up in human bone, lung-lining (mesothelioma), brain tumors and lymphomas.
Monosodium Glutamate
[MSG | glutamate | glutamate acid]
A NEUROTOXIN that's being studied for mutagenic, teratogenic (developmental and monstrosities) and reproductive effects. Allergic reactions can range from mild to severe.†
Neomycin Sulfate [antibiotic]
Interferes with vitamin B6 absorption. An error in the uptake of B6 can cause a rare form of epilepsy and mental retardation. ALLERGIC REACTIONS can range from mild to life threatening.†
Phenol | Phenoxyethanol [2-PE]
Used as anti-freeze. TOXIC to all cells and capable of disabling the immune system's primary response mechanism.
Polysorbate 80
Know to cause CANCER in animals.
Tri (n) Butylphosphate
Suspected kidney and nerve POISON.
† When babies are hours or days old it is impossible to know if they have an allergy.



From 1923 to 1953, before the Salk killed-virus vaccine was introduced, the polio death rate in the United States and England had already declined on its own by 47 percent and 55 percent, respectively. Source: *International Mortality Statistics* (1981) by Michael Alderson.

The foundation of medical science is built upon assumptions. We assume that the polio vaccine eradicated the disease, but it was in steady decline well before it was developed.

There is no scientific evidence to show that vaccines are safe and effective, but we do know that after the introduction of vaccines, the death rates attributed to these diseases plummeted. But there is an inherent problem with this logic.



Measles was 99% gone before the vaccine came out, but the pharmaceutical companies were still deemed the saviours, due largely to a powerful propaganda campaign.

Since correlation does not imply or promise causation, the disappearance of these diseases could be attributed to better hygiene, improved sanitation, as well as a number of other technological advances, all of which came to the scene at the same time as vaccines.

All of a sudden we had flushing toilets and clean running water. We became aware of the importance of nutrition and food sanitation. We covered cesspools and cleaned up the stables and the streets. Better technology, hygiene, and sanitation allowed us to live more salubrious lives, free of dis-ease.

What Science Says About Getting the Flu Shot
The next time you're thinking of getting a flu shot, read the product insert carefully. You'll find some pretty unsettling statements. They tell you themselves, in very small writing, that "There have been no controlled clinical trials demonstrating a decrease in influenza after vaccination..." and that "this vaccine has not been evaluated for carcinogenic or mutagenic potential."
This is basically telling you, in purposefully confusing language, that no scientific data exists showing that the flu shot protects you from getting the flu, AND that no science is available proving it won't give you cancer. The insert will also give you a list of reported side effects, which should be a great cause for alarm.

These changes were made well before vaccines were introduced and as a result death rates for these diseases dropped significantly. It just so happens that after these vaccines were introduced, they continued to drop.

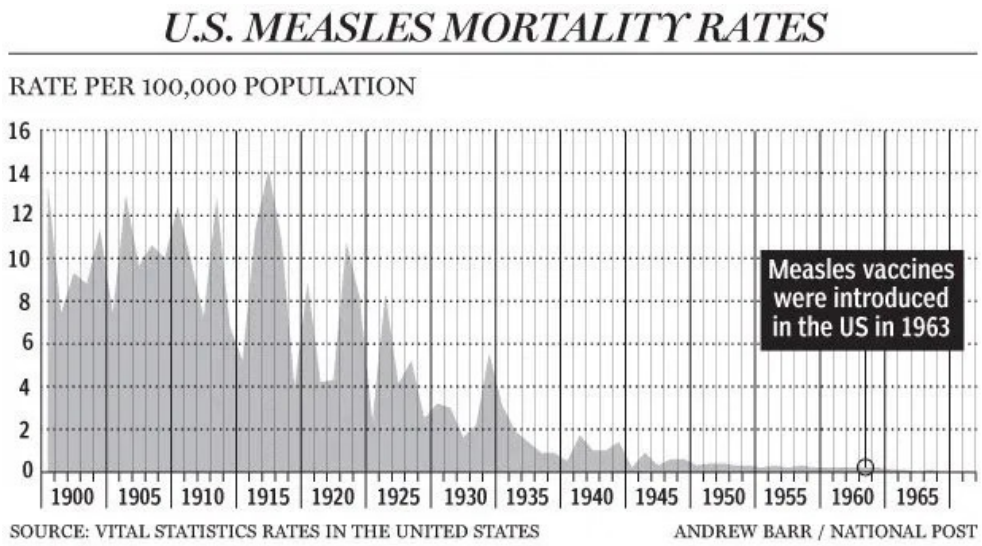
ØDUBS.COM

Around the same time that vaccines were hailed as the magical bullet for health, we also decided to stop feeding our children 'swill milk', or milk that came from cows that were fed 'swill', which a waste product of alcohol distilleries. They used to park CAFO dairy farms next to distilleries. These disillusioned dairy farmers would feed their cows this toxic sludge that's left over from making booze in an attempt to save some cash on cattle feed. We have moved away from this idiotic practice, but have still not learned our lesson, as today's cows are on antibiotics and growth hormones.



Measles was 99% gone before the vaccine came out

There was never a vaccine for Tuberculosis or Scarlet Fever, yet these diseases disappeared. Measles was 99% gone before the vaccine came out. Polio was well on its way out too. It was not vaccines, but drastically improved hygiene, clean water, better nutrition, sanitation and living conditions that got rid of the "vaccine preventable diseases".

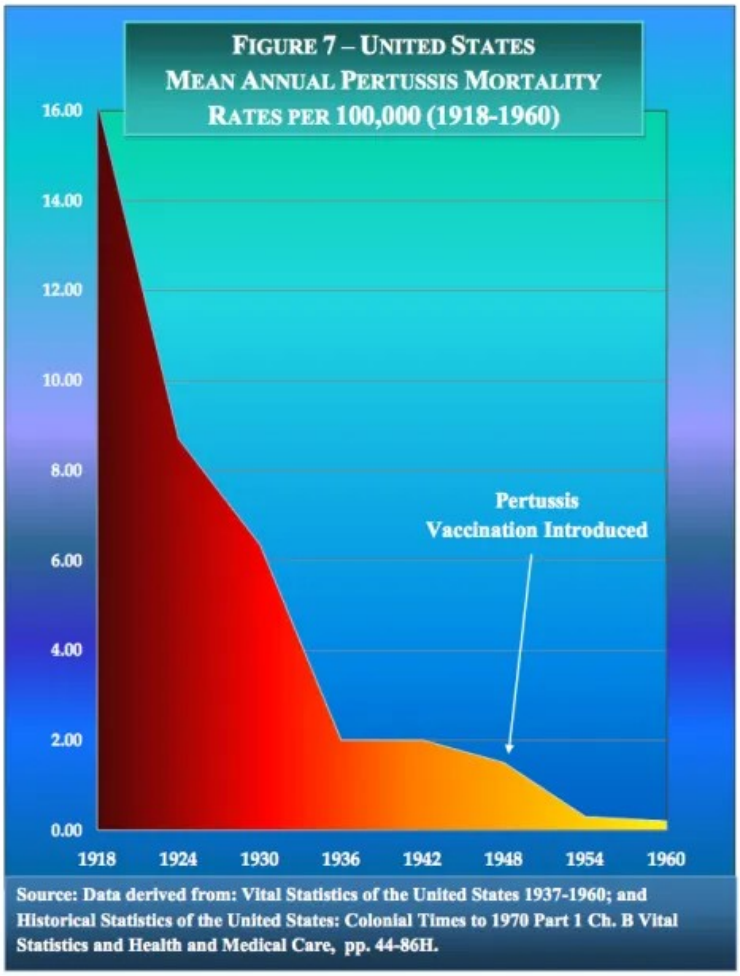
No Vaccination for Scarlet Fever Adopted in the USA
Source: Data derived from - Vital Statistics of the United States 1937-1960; and Historical Statistics of the United States: Colonial Times to 1970 Part 1 Ch. B Vital Statistics and Health and Medical Care, pp. 44-86H.

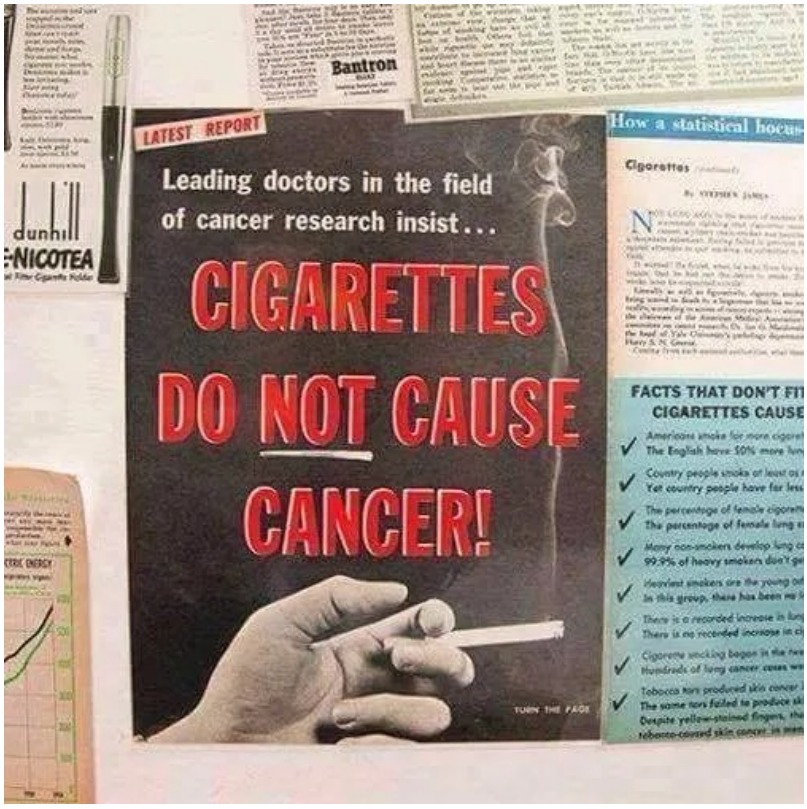
The proponents of vaccination and the germ theory never show us the data before the vaccines were introduced. It might seem like the vaccines worked if we only are shown the data from after the time they were introduced. What caused the steep decline in deaths attributed to Pertussis before the vaccine came out? Maybe we should be more concerned with this data.



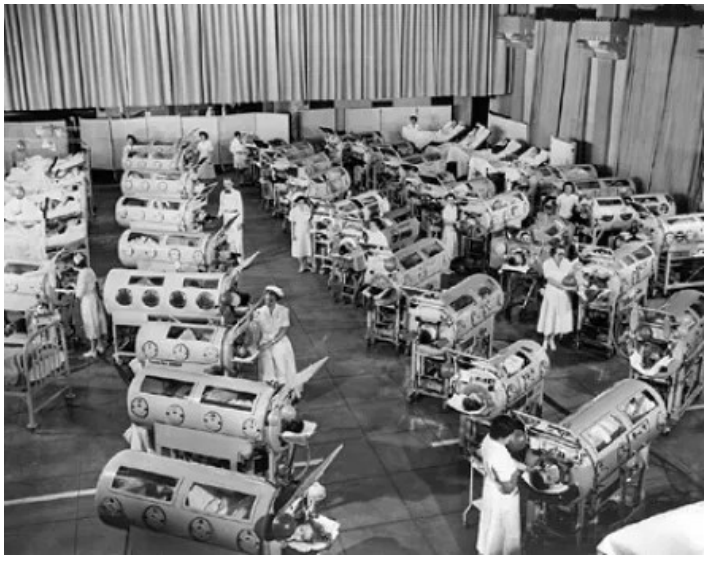
Defenders of vaccination often use logical fallacies or flaws in reasoning. A good example is the 'appeal to emotion' fallacy. "Have you ever seen a kid with iron lungs? Why didn't you vaccinate Timmy?", they'd incorrectly argue. Defenders of vaccines will often use this type of logic to try to win their argument. They are sometimes successful, but only with conversations and debates with people ignorant of these logical fallacies. Another popular one is the appeal to authority fallacy. Though the course of history we are constantly reaffirmed that the experts don't know best.

The Latin phrase "post hoc ergo propter hoc" means, literally, "after this therefore because of this." The post hoc fallacy is committed when it is assumed that because one thing occurred after another, it must have occurred as a result of it. People who argue that the polio vaccine saved us from polio don't understand that their opinion is based on this fallacy in reasoning.

Take the recent cholesterol myth as a prime example. The American Heart Association has long recommended low fat meals, and replacing saturated fats with trans fats and toxic vegetable oils. They changed their minds in 2014, now recognizing their faults, and the tens of thousands of deaths attributed to their bad advice. Listening to the ostensible experts can literally kill you.



The authorities have been wrong before. For this reason we can never rely on them. We must investigate these issues in depth on our own.



A negative pressure ventilator, often referred to colloquially as an iron lung

About 115,000 results (0.87 seconds)
The vaccine was developed over a period of 13 years, from 1908 to 1921, by French bacteriologists Albert Calmette and Camille Guérin, who named the product Bacillus Calmette-Guérin, or BCG. The vaccine is administered shortly after birth only in infants at high risk of tuberculosis. Jan 2, 2018
BCG vaccine | medicine | Britannica.com
https://www.britannica.com/science/BCG-vaccine
Secure | https://www.ncbi.nlm.nih.gov/pmc/articles/PMC3749764/
2012 - 91 years of BCG vaccination
In 1900 Albert Calmette and Camille Guérin began their research for an antituberculosis vaccine at the Pasteur Institute in Lille. They cultivated tubercle bacilli on a glycerin and potato medium but found it difficult to produce a homogeneous suspension of the bacilli. In an attempt to counteract their tendency to clump they tried the effect of adding ox bile to the medium and, to their surprise, they noted that subculture led to a lowering of the virulence of the organism. It was this fortuitous observation that led them to undertake their long term project of producing a vaccine from this attenuated tubercle bacillus (11).
In 1908, starting with a virulent bovine strain of tubercle bacillus supplied by Nocard (originally isolated by him in 1902 from the udder of a tuberculous cow), they cultured it on their bile, glycerine and potato medium and then proceeded to subculture at roughly three weekly intervals. By 1913 they were prepared to initiate a vaccination trial in cattle which was interrupted by outbreak of World War I. Subculturing was continued throughout the German occupation of Lille, despite the greatly increased cost of potatoes and the difficulty of obtaining suitable ox bile from the abattoir. Yet, they managed to obtain this by grace of the veterinary surgeons of the German occupying force. By 1919, after about 230 subcultures carried out during the previous 11 years, they had a tubercle bacillus which failed to produce progressive tuberculosis when injected into guinea pigs, rabbits, cattle, or horses. At Guerin's suggestion, they named it Bacille Bilie Calmette-Guerin; later they omitted "Bilie" and so BCG was born (11).
In 1921, Calmette decided that the time was ripe for a trial of the vaccine in man. The first human administration of BCG was by Benjamin Weill-Halle (1875-1958) assisted by Raymond Turpin (1895-1988) at the Charité Hospital, Paris. A woman had died of tuberculosis a few hours after giving birth to a healthy infant. On 18 July 1921, Weill-Halle and Turpin gave a dose of BCG by the oral route to the infant. There were no undesirable sequelae. The oral route was chosen since Calmette considered the gastrointestinal tract to be the usual route of natural infection by the tubercle bacillus. Weill-Halle then tried the subcutaneous and cutaneous routes on other infants but local reactions were objected to by the parents, and so the oral method was continued, an emulsion of BCG prepared by Boquet and Negre being used. By 1924 they were able to report a series of 664 oral BCG vaccinations of infants (12). The Pasteur Institute at Lille began the mass production of BCG vaccine for use by the medical profession. From 1924 to 1928, 114 000 infants were vaccinated without serious complications (13). In 1928, Calmette called Guerin to join him in Paris, since he did not feel it necessary for Guerin to continue the BCG experiments on animals in Lille. By 1931, there was a special laboratory for the preparation of BCG and Guerin was placed in charge.

Measles

Things aren't always what they seem.

There is no evidence that vaccines are safe nor effective, so the merchants and purveyors resort to distorted statistics to convince the masses to acquiesce to their injected poisons.

"In 1963, John Enders and colleagues transformed their Edmonston-B strain of measles virus into a vaccine and licensed it in the United States."

The graph on the left makes it seem as if the diphtheria vaccine saved the day… Not so fast… Let’s look at the bigger picture.

> *Diphtheria vaccine wasn’t around in the USA before 1980s: In the 1970s, before these vaccines became easily accessible and used worldwide, an estimated 1 million cases of diphtheria including 50 000–60 000 deaths occurred each year in low and middle income countries.6, 7 After the establishment of the Expanded Programme on Immunization (EPI) in 1974, with diphtheria vaccine as one of the original 6 EPI vaccines, the incidence of diphtheria decreased dramatically worldwide. The total number of reported diphtheria cases was reduced by >90% during the period 1980–2000.8, 9, 10*

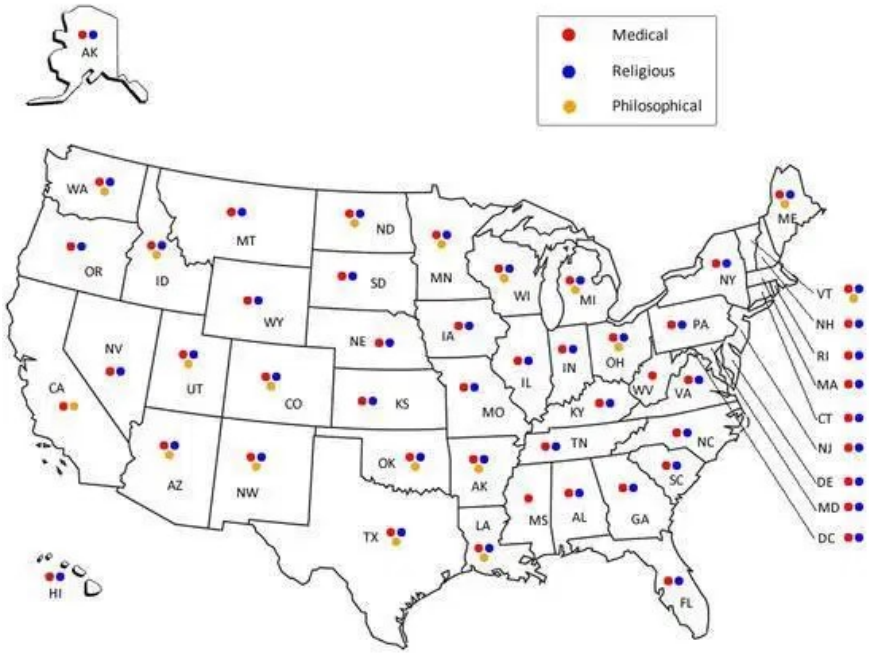
http://apps.who.int/iris/bitstream/10665/258681/1/WER9231.pdf?ua=1

The Diphtheria vaccine was made in the 1920’s but wasn’t available in the USA “before the 1980s” so as you can see from the green graph above, the disease was all but gone before the vaccine was introduced.

Who do they think they are fooling?

Vaccines are NOT mandatory.

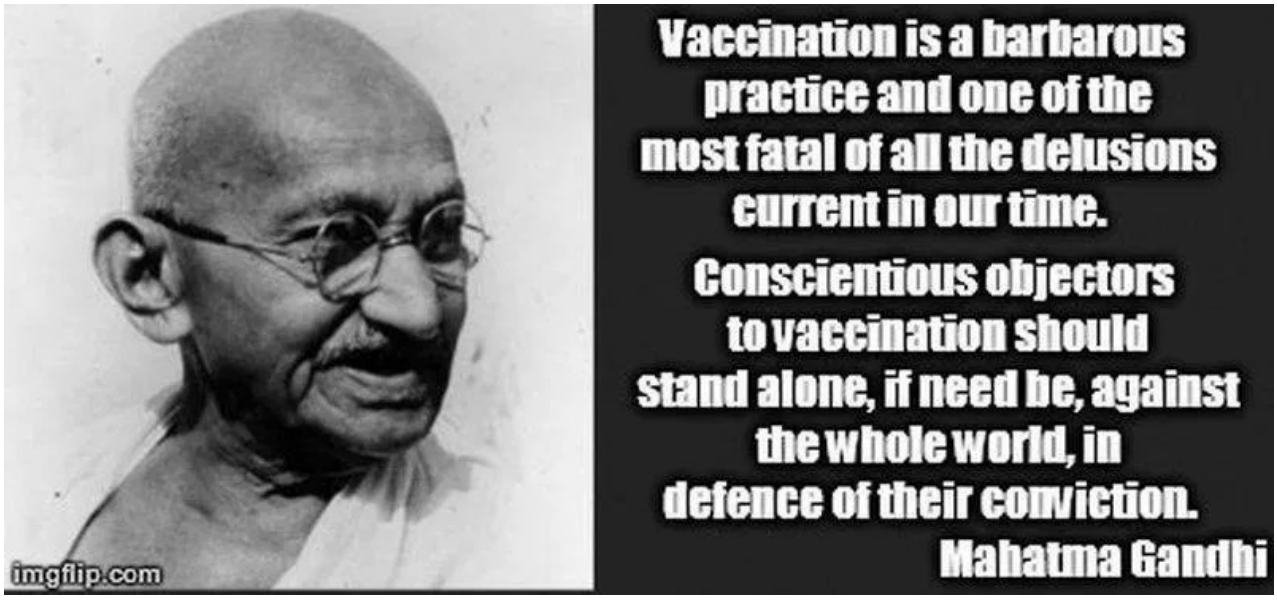
Every state in the US offers at least one form of exemption.



You can opt out in the states for philosophical, religious, and medical reasons.

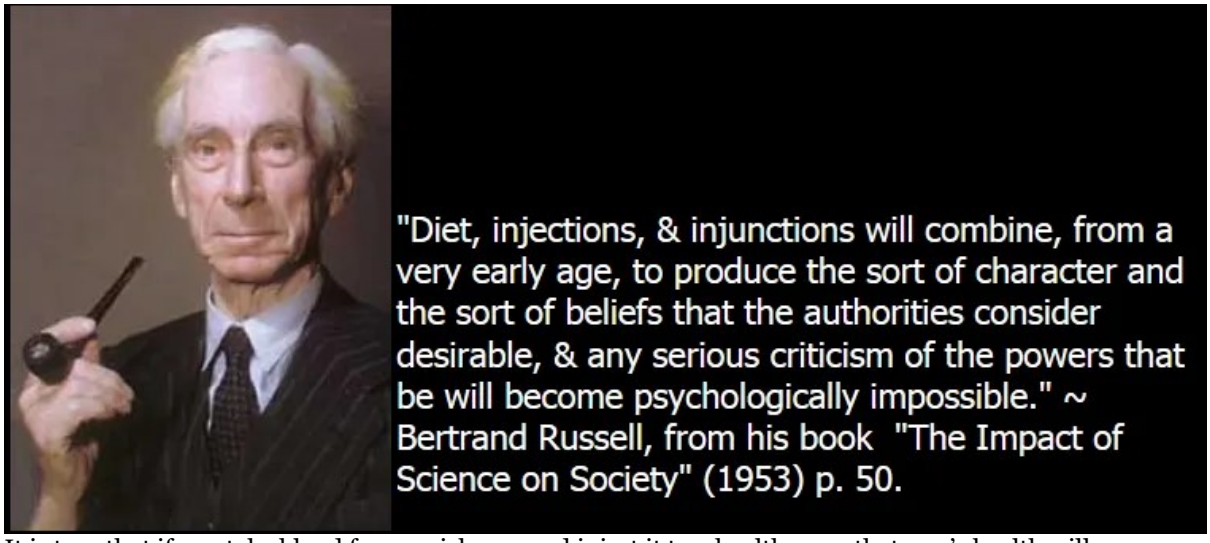
If you live in California, homeschooling is a great idea. Hell if you live anywhere, homeschooling is a great idea.

"Nothing is more curious than the self-satisfied dogmatism with which mankind at each period of its history cherishes the delusion of the finality of its existing modes of knowledge." – Alfred North Whitehead



Vaccination is a barbarous practice and one of the most fatal of all the delusions current in our time.
Conscientious objectors to vaccination should stand alone, if need be, against the whole world, in defence of their conviction.
Mahatma Gandhi
imgflip.com

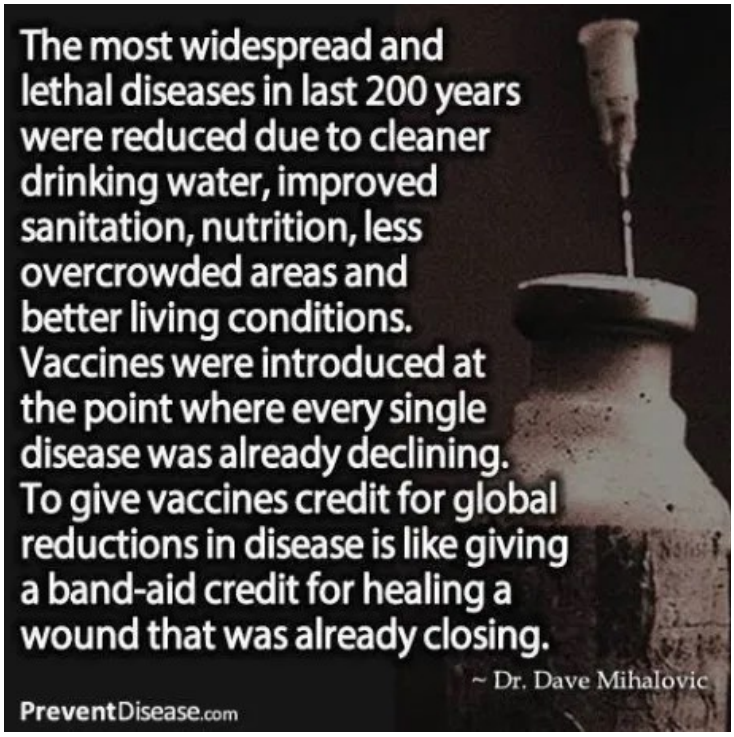
The concept and supposed 'science' behind vaccination stems from the germ theory fallacy, which purports that there is a specific germ for each disease out there, and we have to strengthen our immune system by exposing ourselves to a small quantity of these isolated bacterium. This is a cute idea, but as it turns out, it's not the way that the human body operates. (or any other animal for that matter)



"Diet, injections, & injunctions will combine, from a very early age, to produce the sort of character and the sort of beliefs that the authorities consider desirable, & any serious criticism of the powers that be will become psychologically impossible." ~ Bertrand Russell, from his book "The Impact of Science on Society" (1953) p. 50.

It is true that if you take blood from a sick cow and inject it to a healthy cow that cow's health will deteriorate. This is the 'science' behind vaccinations, being one of the key points that proponents often bring up. Injecting a foreign substance directly into a cow's bloodstream can never be healthy. Of course this will make the cow sick, but this does not prove that it was germs that killed the cow.

It proves that if you compromise the integrity of the organism by subjecting it to an unfavorable environment (any foreign substance injected into the bloodstream) the health of that organism will deteriorate. Disease is born of us and in us. We create our own health and lack there of. Health cannot come from 'out there'. We reap what we sow.



The most widespread and lethal diseases in last 200 years were reduced due to cleaner drinking water, improved sanitation, nutrition, less overcrowded areas and better living conditions. Vaccines were introduced at the point where every single disease was already declining. To give vaccines credit for global reductions in disease is like giving a band-aid credit for healing a wound that was already closing.
~ Dr. Dave Mihalovic
PreventDisease.com

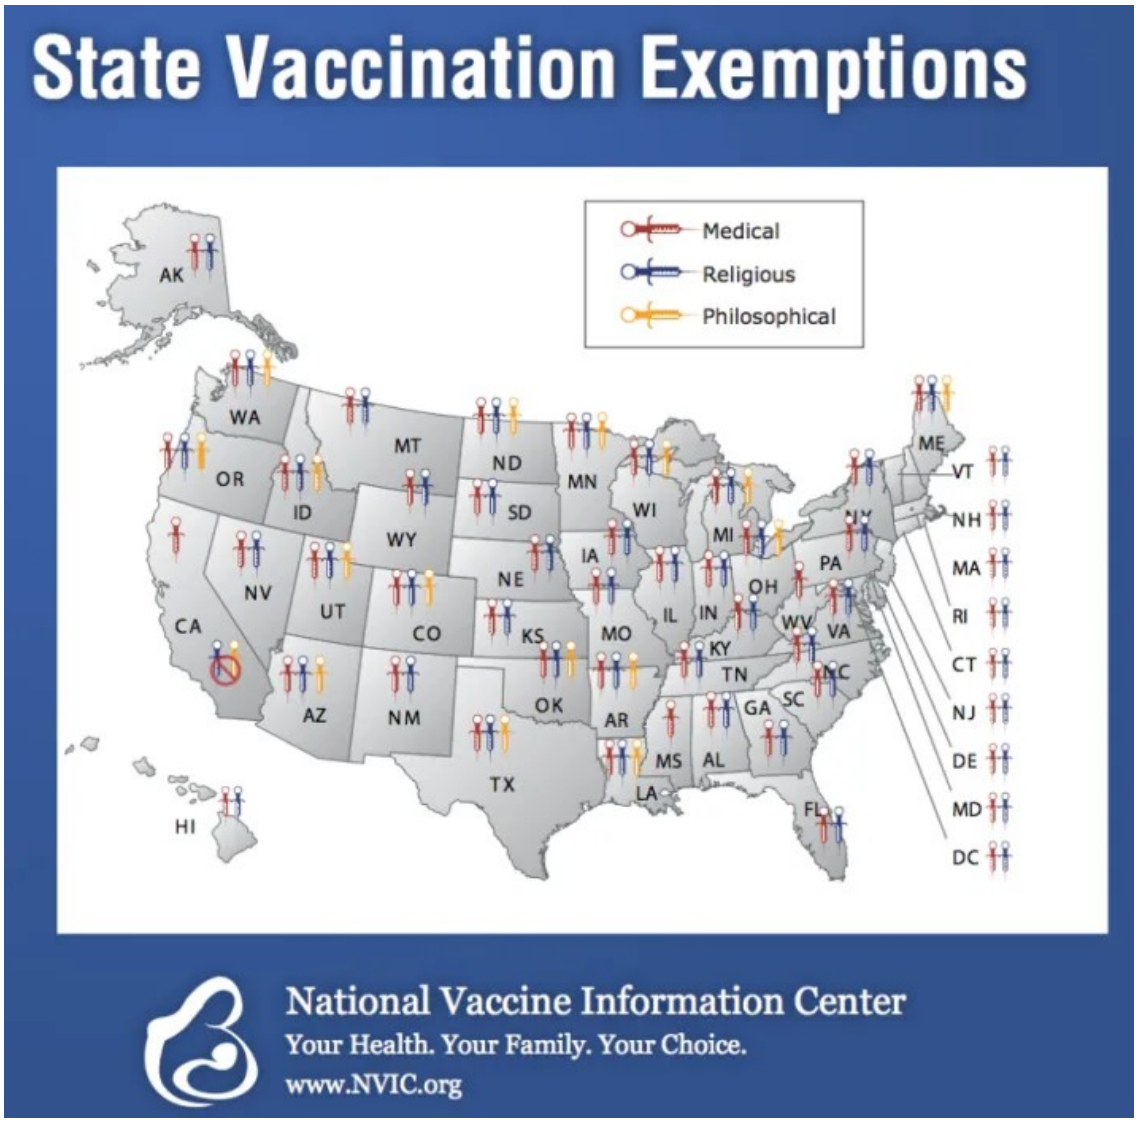
If germs do not cause disease, which I am pretty sure of now, then vaccines are absolutely useless. Their whole premise is based off of the idea that germs invade our body and cause specific diseases based on the specific germs. In reality, our bodies create disease due to an unhealthy environment. The 'germs' we detect in humans are the bodies natural defenses to ward off unhealthy conditions. Germs are like the garbage men of our bodies. The 'cure' to every disease is 'health', and not small doses of poison, as the medical authorities will lead you to believe.

How Plumbing (Not Disease) Eradicated Disease

"The fallacy of this (antibody theory) was exposed nearly 50 years ago, which is hardly recent. A report published by the Medical Research Council entitled 'A study of diphtheria in two areas of Gt. Britain, Special report series 272, HMSO 1950 demonstrated that many of the diphtheria patients had high levels of circulating antibodies, whereas many of the contacts who remained perfectly well had low antibody." – Magda Taylor, Informed Parent

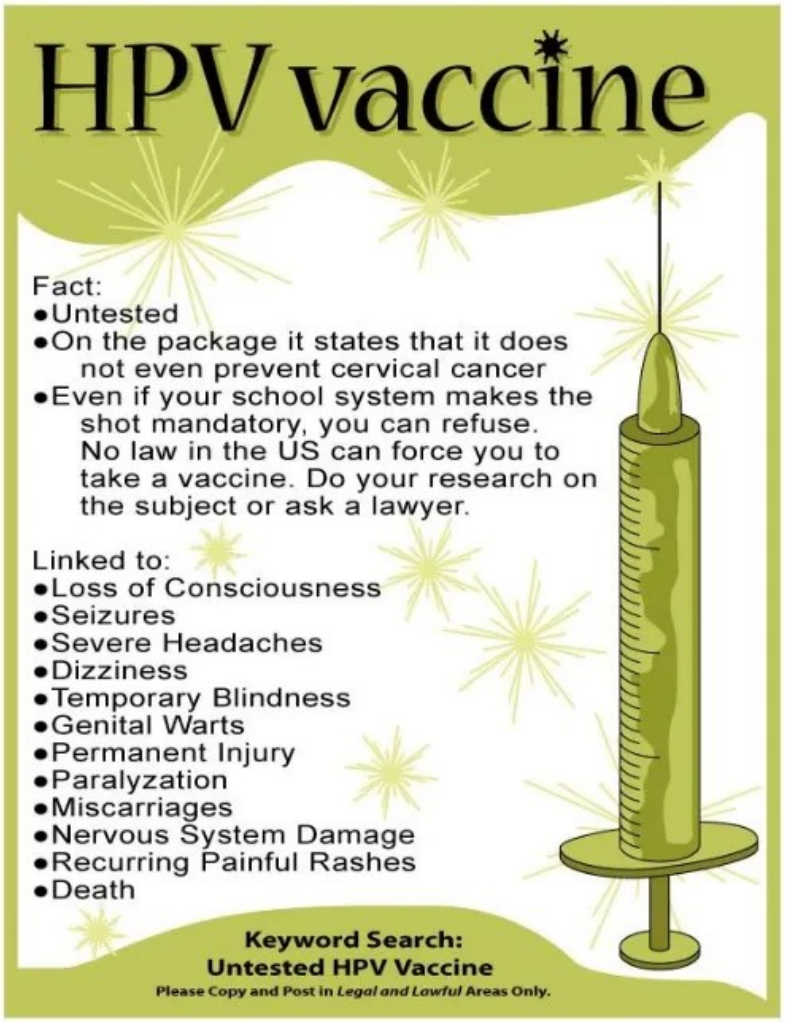
Diseases are the crises of purification of toxic elimination.
Symptoms are the natural defences of the body.
Hippocrates 460 B.C.

It is simply no longer possible to believe much of the clinical research that is published, or to rely on the judgment of trusted physicians or authoritative medical guidelines. I take no pleasure in this conclusion, which I reached slowly and reluctantly over my two decades as an editor of The New England Journal of Medicine. -Marcia Angell, M.D.



Vaccines are NOT mandatory. They are optional.

"Dr. Beauchamp proved that our bodies became hostess to a germ only after chemical and mechanical changes have damaged our immune systems and that as long as our bodies and tissues retain high vitality, a germ, infection will not make progress. For example, if we see flies on a manure pile which do we think is more intelligent – to fight disease be swatting flies or to remove the pile of manure." -Dr. J. Baldor, Surgeon, Florida



HPV vaccine
Fact:
•Untested
•On the package it states that it does not even prevent cervical cancer
•Even if your school system makes the shot mandatory, you can refuse. No law in the US can force you to take a vaccine. Do your research on the subject or ask a lawyer.

"We still mistakenly cling to the germ theory…For example, the bacteria that causes pneumonia called streptococcus pneumonia is a normal bacteria residing in all our throats. Since we all don't get pneumonia from it, the determining factor is not the virulence of the bacteria. The bacteria multiplies without restraint only when our immune systems become compromised." -Stephen Kuprowsky, ND, Nanaimo, BC

"The man is not sick because he has an illness, but has an illness because he is sick."
– Author Unknown

- **Formaldehyde** is used to inactivate bacterial products for toxoid vaccines, (these are vaccines that use an inactive bacterial toxin to produce immunity.) It is also used to kill unwanted viruses and bacteria that might contaminate the vaccine during production. Most formaldehyde is removed from the vaccine before it is packaged.
- **Monosodium glutamate** (**MSG**) and 2-phenoxy-ethanol which are used as stabilizers in a few vaccines to help the vaccine remain unchanged when the vaccine is exposed to heat, light, acidity, or humidity.
- **Thimerosal** is a mercury-containing preservative that is added to vials of vaccine that contain more than one dose to prevent contamination and growth of potentially harmful bacteria.

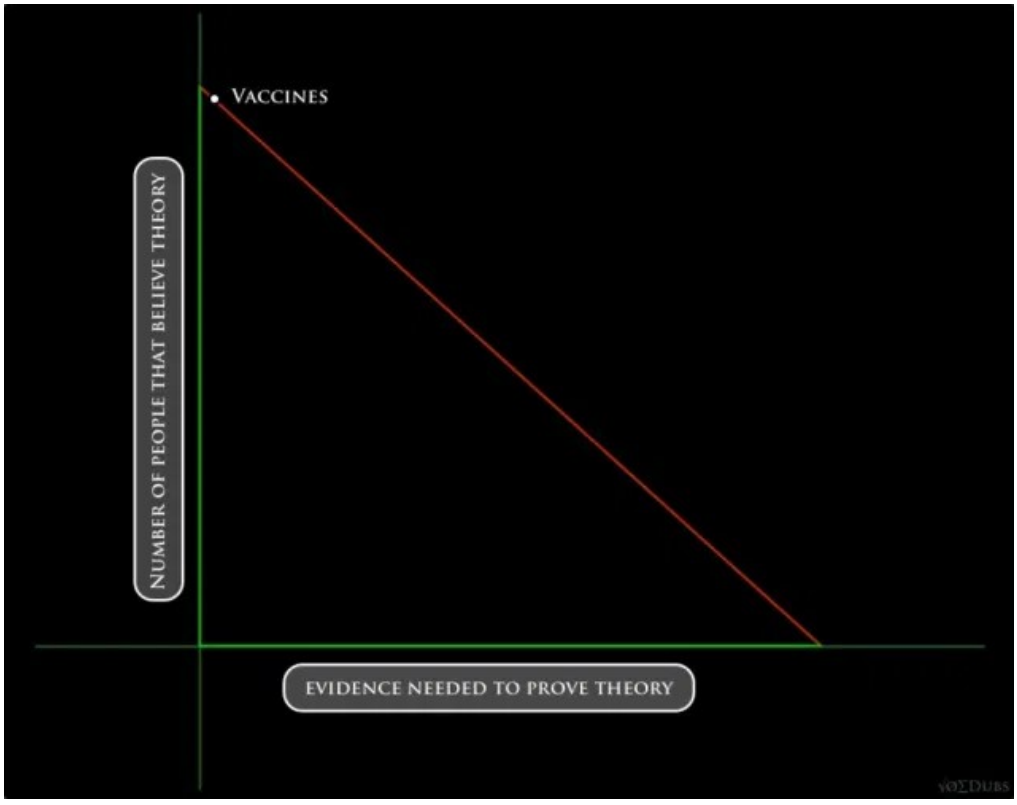
For children with a prior history of allergic reactions to any of these substances in vaccines, parents should consult their child's healthcare provider before vaccination.

From the cdc.gov website. These are just some of the harmful ingredients contained in vaccines. It doesn't help if you just take out thimerosal, the mercury containing preservative. All the ingredients are cytotoxic.

Formaldehyde is a carcinogen according to the EPA

Do not let either the medical authorities or the politicians mislead you. Find out what the facts are, and make your own decisions about how to live a happy life and how to work for a better world. – Linus Pauling

If I could live my life over again, I would devote it to proving that germs seek their natural habitat —diseased tissue—rather than being the cause of the diseased tissue; e.g., mosquitoes seek the stagnant water, but do not cause the pool to become stagnant. -Rudolph Virchow (Father of Pathology)



The more commonly accepted a theory is, the less evidence required to prove it's correct, since we already "know" it's true.

"Assumption is the mother of all f!%ups" -that guy from Under Siege II*

"Bernard acail raison; le terrain c'est tout, le germe c'est rien."
"It was not the germ that caused the disease, but rather the environment in which the germ was found."

– Louis Pasteur – The father of the fallacious germ theory

"Diseases are not individuals arranged in classes like cats and dogs, but conditions growing out of one another. The specific disease is the grand refuge of the weak, uncultured, unstable minds, such as now rule in the medical profession. There are no specific diseases; there are specific disease conditions." Florence Nightingale -1860
